A 10-Page Sample Guide to Common and Interesting Fruits

This sample PDF introduces ten items with a short description and one interesting fact for each.

Prepared as a sample educational document

1. Apple

Apples are crisp fruits that come in many varieties, colors and flavors. They grow on trees in temperate regions and are commonly eaten fresh, cooked or used in juices and desserts.

Key fact: Apples float in water because they contain a significant amount of air.

2. Banana

Bananas are soft, sweet fruits that grow in clusters on large herbaceous plants. They are widely eaten around the world and are especially valued as a convenient source of carbohydrates.

Key fact: Botanically, the banana plant is a giant herb rather than a typical woody tree.

3. Mango

Mangoes are tropical fruits known for their juicy flesh, fragrant aroma and sweet flavor. They come in many varieties and can be eaten fresh or used in drinks, chutneys and desserts.

Key fact: Mango is one of the world's major tropical fruit crops.

4. Orange

Oranges are citrus fruits with a juicy interior divided into segments. They are commonly eaten fresh and are also widely used to make juice. Their bright flavor comes from a combination of natural sugars and acids.

Key fact: Oranges contain vitamin C and many plant compounds, including flavonoids.

5. Strawberry

Strawberries are small, aromatic fruits that grow close to the ground. Their bright red color and sweet-tart taste make them popular in fresh fruit dishes, desserts and smoothies.

Key fact: The tiny structures on the outside of a strawberry are actually individual fruits called achenes.

6. Pineapple

Pineapples are tropical fruits with a tough, patterned skin and juicy yellow flesh. They are eaten fresh, canned and used in savory and sweet recipes.

Key fact: A pineapple is a multiple fruit formed from many flowers that fuse together.

7. Watermelon

Watermelons are large, refreshing fruits with a high water content. They are especially popular in warm weather and are commonly eaten chilled or added to fruit salads and drinks.

Key fact: Watermelon is classified botanically as a type of berry called a pepo.

8. Papaya

Papayas are tropical fruits with soft orange flesh and many black seeds. They are eaten fresh and are also used in salads, smoothies and cooked dishes.

Key fact: Papaya contains an enzyme called papain that can help break down proteins.

9. Grapes

Grapes grow in clusters on woody vines and are available in green, red, purple and black varieties. They can be eaten fresh, dried into raisins or processed into other foods and beverages.

Key fact: Different grape varieties can have very different flavors, textures and skin colors.

10. Pomegranate

Pomegranates have a thick outer skin filled with hundreds of juicy seed-covered structures called arils. The arils can be eaten fresh or used in salads, sauces and drinks.

Key fact: A single pomegranate can contain hundreds of arils.
